Downloading Apache Maven 3.9.11

Apache Maven 3.9.11 is the latest release: it is the recommended version for all users.

System Requirements

Java Development Kit (JDK) Maven 3.9+ requires JDK 8 or above to execute. It still allows you to build against 1.3 and other JDK versions [by using toolchains](#).

Memory No minimum requirement

Disk Approximately 10MB is required for the Maven installation itself. In addition to that, disk space will be used for your local Maven repository. The size of your local repository will vary depending on usage but expect at least 500MB.

Operating System No minimum requirement. Start up scripts are included as shell scripts (tested on many Unix flavors) and Windows batch files.

Files

Maven is distributed in several formats for your convenience. Simply pick a ready-made binary distribution archive and follow the [installation instructions](#). Use a source archive if you intend to build Maven yourself.

In order to guard against corrupted downloads/installations, it is highly recommended to [verify the signature](#) of the release bundles against the public [KEYS](#) used by the Apache Maven developers.

Sunny

A screenshot of a web browser window showing the Apache Maven Project download page. The address bar contains the URL maven.apache.org/download.cgi. A tooltip suggests setting Google Chrome as the default browser. The main content area features the Apache Maven logo and navigation links for 'Download' and 'Get Sources'. The page title is 'Apache / Maven / Download Apache Maven'.
